

## Urban master plan for 2030 and 2050 Vision planning for Vinh Phuc Province

Urban system plan

Land use plan

**Ordering party:** Vinh Phuc Province, Vietnam

**Planning summary :** Area: 318 km<sup>2</sup> ( urban district )

**City population:** 1 million ( year 2030 ), Province population : 1.8 million ( year 2030 )

**Services :** Vision planning for 2050 and Urban master plan for targeted to 2030

Socioeconomic prediction, Study on future urban system, Land use planning,

Infrastructure planning, Strategic environment assessment, Review on urban management planning

**Time of services :** 2009

Vinh Phuc Province, located about 40km northwest of Hanoi, is one of the high performing economic areas in North Vietnam and playing a significant role in industrialization and tourist business.

We made an urban master plan for this area focusing well balanced city function which can maintain both economic development and environmental protection:

- (1) Multi functional urban structure based on public transportation system
- (2) Radial beltway network
- (3) Green pedestrian path running north-south at the center of the province
- (4) Garden city concept with green belt

For infrastructure, we set facility improvement vision targeted to 2030 with step by step planning. It includes integrated flood control measures with the concept of "flood-safe city" holding large sized retarding basin and forcible drainage system into Hong River.

We also suggested the needs for new management system and urban development methods to carry out these plans for the future.
