Summary :

Traffic square

Route bus : 4 berths

Shuttle bus : 1 berth

Taxi pool : 1

Taxi pool : 24 cars

Bus shelter : 587.45 m² steel-frame

Extension : approx. 200 m

Services : Basic design, Execution design, Construction
supervising (Bus shelter only)

Completion : March, 2015

The traffic square on the ground is redeveloped at the same time as the underground bicycle parking space is developed.

The traffic square faces Harumi Street and is adjacent to the Category-1 Urban Area Redevelopment Project of the Toyosu 2-chome station front area. Therefore, as a portal site of the Toyosu district, development of the space integrated with the surrounding city areas was requested.

To enhance the convenience of the traffic square, bus shelters were laid out throughout the square. A space lit by soft light was created with simple design by integrating lights into the shelter. By re-using the stone monument which had been placed in the old square and providing benches of natural wood, a warm design was achieved while preserving the history of the square.
