- Partial underground 3 floors
 - B1F, B2F : Business district
 - B3F : Parking space

Service : Concept design

Time of service : 2007

This planning area is located at the center of Nanjing on the Hunan Street (width 32m) located west of the Xuanqu Lake, the extension of 1.1km that its east end is connected to the Subway 1 station and its west end to Subway 5 (plan).

We established the concept that the bright underground space makes feel people nature with a focus on the continuity with the aboveground space.

We designed the underground space to be divided into 4 blocks and ensured the safe and easily understandable planning by having the facility system and the logistics system independently. We also located the underground square and the underground town having various themes. Now, the local design institute has been preparing the initial design.
