Location : Odaiba, Minato-ku, Aomi/Ariake, Koto-ku

Site area : 24ha

Services : Master plan, Basic and detailed design

Time of services : June 1996

This area was designed to offer a composite space including parks, open spaces, and passage with an abundance of greenery where people can get close to nature. For the area facing the private district, a human-scale design was adopted to create both prosperity of the new Tokyo waterfront subcenter and open environment. In contrast with the neighboring buildings that create "Scenery" by displaying their originalities, this promenade was designed to create a peaceful and green "Land" by making it fit in its environment. In addition, while creating a space that varies with its land characteristics, we also considered the use of human eyes-friendly environmental lightings and reusable pavement materials and the creation of a space where people can use it in various ways
