Project summary :

- Bridge structure : PC continuous rigid-frame bridge with V-shape piers
- Length: 97.6m
- Width: Effective width 4.5m

Services : Detailed design

Time of services : 2003

This is the central pedestrian bridge built to connect Campus 1 and Campus 2 as part of the comprehensive project for relocation to Kakuma-machi, Kanazawa City. The pedestrian bridge designed in a barrier-free environment is easily accessible to everyone and allows pedestrians to walk comfortably without an umbrella in any weather and climate specific to Hokuriku area. The modern campus appropriate for the 21st century maintains harmony with the surrounding buildings.
